

Windows 10 “What’s New” Webinar

This 1-day webinar is targeted to software developers writing device drivers and system-level software for Windows. It describes the feature and internal changes to Windows that may affect device driver development and platform-specific software. Additionally, as Windows 10 evolves into new target markets, the effect of support for new device types is presented. While not a “hands on” seminar, the presenter will demonstrate new features and the new “kit” software for Windows 10.

Topics:

- Windows 10 – What It Is
- UI Changes
- Run Everywhere, With Everything
 - IoT, Raspberry Pi, Galileo Gen 2
- What’s Inside
- Common Core API
- Universal Drivers
- Visual Studio for Win10
- WDK 10
- Non-changes for Win10
